EDUCATION

The George Washington University

B.S. Information Systems, GPA: 3.97, Dean's List

Washington, DC

December 2026

Relevant Coursework: Python, Database Management, Business Analytics, Business Systems Development, Web & Social Analytics

TECHNICAL

Programming: Python, JavaScript, SQL, R, HTML, CSS

AI & Data Skills: LLM integration (Claude API, GPT API, SERP API), prompt engineering, LLM evaluation, data analysis, linear regression, A/B testing

Tools & Platforms: React, GitHub, Databricks, MySQL, Jupyter Notebook, Excel, Tableau, Jira, LucidChart, VS Code

Certifications: Google Data Analytics Professional Certificate

EXPERIENCE

Handshake AI

AI Training and Evaluation Contractor

Remote

December 2025 – Present

- Design adversarial engineering tasks for frontier LLMs in environments where no reference solution exists, identifying failure modes and edge cases that inform model improvement across Claude and other leading models.
- Evaluate multimodal AI outputs across audio, visual, and text formats, maintaining a quality threshold that keeps active project status across concurrent AI training programs.

The George Washington University

Business Systems Dev. Teaching Assistant

Washington, DC

August 2025 – Present

- Teach weekly labs to a class of 40-45 students on topics including critical path, data flow diagrams, entity-relationship diagrams, and systems documentation, stepping in as the primary instructor for each session.
- Grade two assignments per student weekly across a class of 40-45 students, applying consistent rubric standards and returning structured written feedback that tracks improvement over the semester.
- Hold one-on-one meetings with students who need additional support and organize pre-exam study sessions, directly improving student comprehension and performance on assessments.

Extern | News Corp

AI Product Strategy Analyst / Cohort Leader

Remote

May 2025 – August 2025

- Designed and administered a mixed-methods survey across a 50-person cohort to diagnose why Gen-Z users were disengaging from AI personalization features, identifying root causes behind three lagging KPIs: trust, adoption, and engagement.
- Translated findings into three product recommendations for The Times with a phased rollout and A/B testing strategy, selected to present to the VP of Engineering whose team accepted the work as the most comprehensive submitted.
- Coordinated deliverables and methodology alignment across 50 externs as cohort leader, achieving 100% on-time completion across the full externship program.

Extern | PwC

Non-Profit Consulting Extern

Remote

January 2025 – March 2025

- Researched 150+ institutional funding sources for a nonprofit facing a declining donor base, evaluated each against organizational fit and funding likelihood, and narrowed to three high-potential opportunities representing up to \$1M in potential funding.
- Presented detailed application roadmaps to PwC consultants and the nonprofit client, with all three recommendations acted on directly.

LEADERSHIP & INVOLVEMENT

GWU Student Information Technology Association (SITA)

Co-Founder & President

Washington, DC

January 2025 – Present

- Co-founded GWU's first Information Systems student organization, scaling to 100+ members in one semester with partnerships at Deloitte, Amazon, Google, and AWS; organized a campus AWS hackathon end-to-end as President.

GWU ColorStack Chapter

Founder & President

Washington, DC

January 2026 – Present

- Founded GWU's ColorStack chapter to connect Black and Latinx tech students to technical recruiting pipelines at major firms.

PROJECTS

Olio – AI Shopping Tool (Claude/GPT API, SERP API, React)

- Independently built a full-stack AI shopping assistant where users describe what they want in natural language and the app surfaces real-time product results, engineering prompts and refining the LLM interaction model through iterative user testing.

Ride-Share Pricing Analysis (Python, SQL, Databricks)

- Merged two large Kaggle datasets in Databricks, applied exploratory data analysis and linear regression to identify surge pricing as the primary driver of fare variance between Uber and Lyft, and produced a strategic pricing recommendation for stakeholders.
