

EDUCATION

The George Washington University

B.S. Information Systems, GPA: 3.97, Dean's List

Relevant Coursework: Business Analytics, Python, Database Management, Statistics, Business Systems Development, Web Analytics, Web Applications Development

Washington, DC

December 2026

TECHNICAL

Programming: Python, SQL, JavaScript, HTML, CSS, R

Tools & Platforms: Excel, Google Sheets, Canva, Tableau, Power BI, Databricks, GitHub, MySQL, VS Code, Jira, LucidChart, Figma, Notion

Product & AI Skills: A/B testing, Customer journey mapping, LLM product integration, GEO/SEO awareness, Data storytelling, Agile/Scrum, Stakeholder communication

EXPERIENCE

The George Washington University

Business Systems Dev. Teaching Assistant

Washington, DC

August 2025 -Present

- Facilitate weekly labs on systems analysis, data flow modeling, and Python programming for 45+ students, reinforcing structured analytical problem-solving and technical communication skills.
- Establish and maintain documentation standards across 90+ weekly deliverables, providing targeted feedback that improves output quality and analytical clarity semester over semester.

Extern

News Corp AI Product Strategy Extern

Remote

May 2025 -August 2025

- Designed and administered a mixed-methods survey to diagnose why Gen-Z users were disengaging from AI personalization features across News Corp apps, combining cohort responses across 50 externs to identify root causes behind three lagging KPIs: trust, adoption, and engagement.
- Analyzed quantitative and qualitative survey findings to surface three core barriers including data privacy concerns and perceived information bubbles, translating patterns into structured product insights and actionable recommendations.
- Developed three product recommendations using Figma for The Times targeting Gen-Z KPI improvement, proposed a phased rollout and A/B testing strategy for engineering teams, and was selected to present to the VP of Engineering and a senior Product Manager whose team accepted the work as the most comprehensive submitted.
- Led cohort coordination across 50 externs, aligning survey methodology, managing deliverable timelines, and synthesizing data to ensure 100% on-time completion.

Extern

PwC Non-Profit Consulting Extern

Remote

January 2025 -March 2025

- Researched and evaluated 150+ institutional funding sources for a nonprofit client facing a declining individual donor base, organizing findings in a structured Excel tracker assessing organizational fit, funding likelihood, and application requirements.
- Narrowed research to three high-potential institutional donors representing up to \$1M in funding, developed detailed application roadmaps with timelines and step-by-step guidance, and presented recommendations to PwC consultants and the nonprofit client, who applied to all three.

LEADERSHIP & INVOLVEMENT

GWU Student Information Technology Association (SITA)

Co-Founder & President

Washington, DC

January 2025 -Present

- Co-founded GWU's first Information Systems organization and scaled it to 100+ members in one semester, building partnership pipelines with Deloitte, Amazon, Google, and AWS to deliver technical and product-focused programming.
- Spearheaded a campus AWS sustainability hackathon as President, managing cross-functional coordination across student teams, corporate judges, and university stakeholders from intake through execution.

PROJECTS

Olio -AI Shopping Tool (GPT + SERP API)

- Independently built an AI-powered shopping assistant using GPT and the SERP API, engineering prompts that translate natural language customer input into real-time product results, with a full cart, saved items, and iterative UX refinement cycle.
- Applied vibe coding and low-code development approaches to move quickly from concept to working product, testing LLM interaction models and refining the customer handoff experience through iterative experimentation.

Ride-Share Pricing Analysis (Python, SQL, Databricks)

- Merged two large datasets in Databricks using Python and SQL, performed exploratory data analysis across thousands of rides, and applied linear regression to identify surge pricing as the primary driver of fare variance between Uber and Lyft.
- Produced a data-backed growth recommendation for Lyft's pricing and customer trust strategy, presenting findings with clear data visualizations to stakeholders.
